**ICDT 2017, April 23 - 27, 2017 - Venice, Italy**

The Twelfth International Conference on Digital Telecommunications

<http://www.iaria.org/conferences2017/ICDT17.html>

The next wave in area of computing will be Internet of Things (IoT). In IoT paradigm every object will be connected to internet in one form or other. The basic components of IoT are Radio Frequency Identification (RFID) and sensor network technologies. After connecting many objects to internet huge data will be available. To process such a huge data and to interpret it in structured format is a big challenge. To handle data efficiently and intelligently artificial intelligence (AI) tools are required. This special session focuses on use of AI techniques in IoT to provide intelligent decisions to end users in engineering sectors.

**Authors are invited to submit papers describing challenges and issues in topic areas such as:**

- Architectures for Intelligent IoT Applications
- Sensor Innovations
- Cloud data analytics & security
- IIoT applications to Manufacturing Industries
- Traffic Control system using IIoT
- Robot navigation using IIoT
- Applications of Intelligent IoT in Textile Industries
