Today, there has more prominent need for adequate security mechanisms in order to manage today's security threats. The ever-increasing popularity of the Internet and electronic communication devices cause the growing privacy and security needs in digital records. Also, the increasing automation of environments are expanding the risk of data breaches. Individual privacy is also a major issue for today's information systems. Therefore, critical privacy and security problems have to be overcome, and effective security management processes have to be proposed. There is need for new techniques and tools to prevent, detect and respond to security challenges.

The main objective of this track is to present the latest developments in the field of security and bringing together researchers and practitioners. We seek previously unpublished papers offering novel research contributions in any aspect of security, privacy or trust management.

Topics of interest include, but are not limited to:

- Access Control and Authorization
- Anonymity
- Applied Cryptography
- Application Security
- Authentication and Identity Management
- Cloud Security
- Cybersecurity
- Distributed systems security
- Forensics
- Information Security
