along with

**eTELEMED 2018**, The Tenth International Conference on eHealth, Telemedicine, and Social Medicine

<http://www.iaria.org/conferences2018/eTELEMED18.html>

Chronic diseases cannot be prevented by vaccines or cured by medication, nor do they just disappear. Chronic disease last for a long time, and can hardly be cured. Therefore how to provide preventive and monitoring healthcare becomes a worldwide concern. Living with a chronic disease has a significant impact not only on a person's quality of life, but also on their family, and on healthcare systems.

Information Communication Technology (ICT) evolution has led to widespread use of wireless personal devices like smartphones, personal computers and other self-monitoring devices. In this way, chronic disease can be greatly improved from the use of ICT given the clinical importance of continuous monitoring and adjustment of care.

### Topics include, but not limited to:

- Chronic disease management by ICT tools
- Chronic disease care data processing and analysis
- Distance care of chronic disease supported by ICT
- mHealth for chronic disease care
- Digital games for chronic disease care
