March 24, 2019 to March 28, 2019 - Valencia, Spain

The expected development of next generation networks in the following years will cope with the integration strategies of computing and networking dynamic resource management providing the agility needed to attend the expected online and real time service demand.

5G imminent deployments urge both academia and industrial communities to work together in finding service orchestration solutions that effectively solve resource management problems related to access networks and computational facilities. Network and computing virtualization also takes an important role in order to obtain good performance and energy efficiency when optimizing available system resources.

**Authors are encouraged to submit contributions** that address the following topics, but not limited to:
- Edge computing,
- Fog computing,
- MEC (Multi-Edge Computing and Mobile Edge Computing),
- Agile networks,
- Multi-dimensional resource optimization,
- SDN (Software Defined Networks),
- NFV (Network Functions Virtualization).
