Unhealthy lifestyles lead to increased premature mortality and are a risk factor for sustaining noncommunicable diseases (NCDs) such as cardiovascular diseases, cancers, chronic respiratory diseases, and diabetes. There are four behavioural factors that have a substantial influence on NDCs: nutrition, smoking, body weight, and physical activity. Timely real time intervention on unhealthy behaviour is often needed to reduce the risk of premature mortality and preventing NDC’s. For a human coach it’s impossible to monitor behaviour constantly and provide timely the personalized feedback enabling direct change of behaviour. Increasing availability of data from mobile devices and techniques for real time analysis provide new opportunities for automated personal virtual coaches enabling direct personalized feedback. The application of mobile devices, virtual coaches, feedback systems, behaviour change and sustaining change require a multidisciplinary cooperation of diverse disciplines. The aim of this special track is to identify the required knowledge and disciplines to enable effective personalized virtual coaches.

Topics include, but not limited to:

- E-coaching
- Virtual coaching
- Sensors
- Wearables
- Emotion recognition
- Effective coaching strategies
- Machine learning for automating coaching
- Personalized eHealth
- Persuasive technology
